1. Introduction

PCOM-B645VGL User Manual contains detail information of the product specifications, features, mechanical dimensions, heat sink/heat spreader and BIOS settings.

PCOM-B645VGL is designed to fulfill PICMG Open Modular Computing Standards COM Express™ Specification Rev3.0 Type 6 with Basic form factor (95 x 95 mm).

PCOM-B645VGL, a brand-new COM-Express Type 6 compact module launched by Portwell Inc. PCOM-B645VGL is designed based on Intel® Atom® Elkhart Lake series processors, and it plans to satisfy most of entry applications. PCOM-B645 provides multiple interfaces like 6x PCIe 3.0 x1, 2x SATA 3.0 ports, and 4x USB3.2 Gen2 ports. With 2.5GbE PHY, it provides option of Time Sensitive Networking(TSN) and Time Coordinated Computing(TCC) for real-time applications. Intel® UHD Graphics (Gen11) controller brings 4K high definition resolution and supports three independent displays. Furthermore, PCOM-B645VGL also can support in extreme environment from -40°C ~ 85°C.

6. BIOS Setup Items

6.1. Introduction

The following section describes the BIOS setup program. The BIOS setup program can be used to view and change the BIOS settings for the module. Only experienced users should change the default BIOS settings.

6.2. BIOS Setup

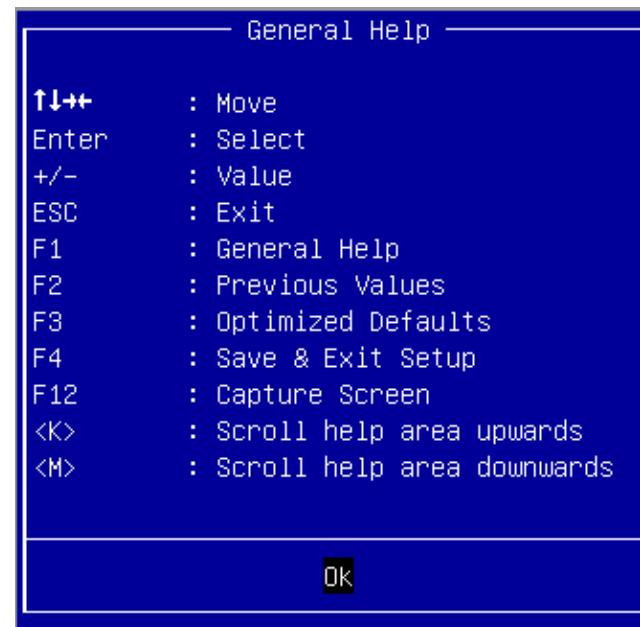

Power on the computer and the system will start POST (Power on Self Test) process. When the message below appears on the screen, press <Delete> or <ESC> key will enter BIOS setup screen.

Press <ESC > or <Delete> to enter SETUP

If the message disappears before responding and still wish to enter Setup, please restart the system by turning it OFF and On or pressing the RESET button. It can be also restarted by pressing <Ctrl>, <Alt>, and <Delete> keys on keyboard simultaneously.

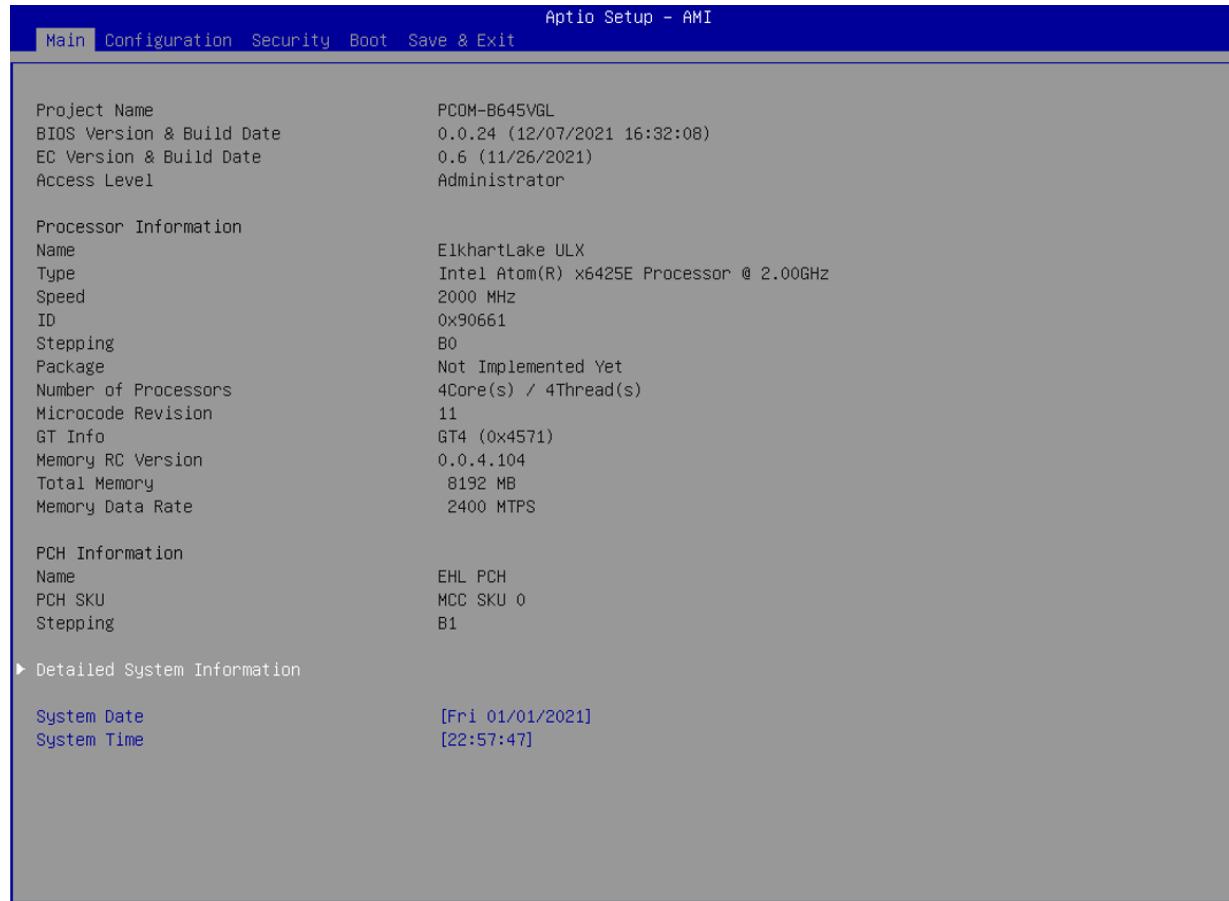

Press <F1> to Run General Help or Resume

The BIOS setup program provides a General Help screen. The menu can be easily called up from any menu by pressing <F1>. The Help screen lists all the possible keys to use and the selections for the highlighted item. Press <Esc> to exit the Help Screen.

6.2.1 Main

Use this menu for basic system configurations, such as time, date etc.

COM0 Console Redirection Settings

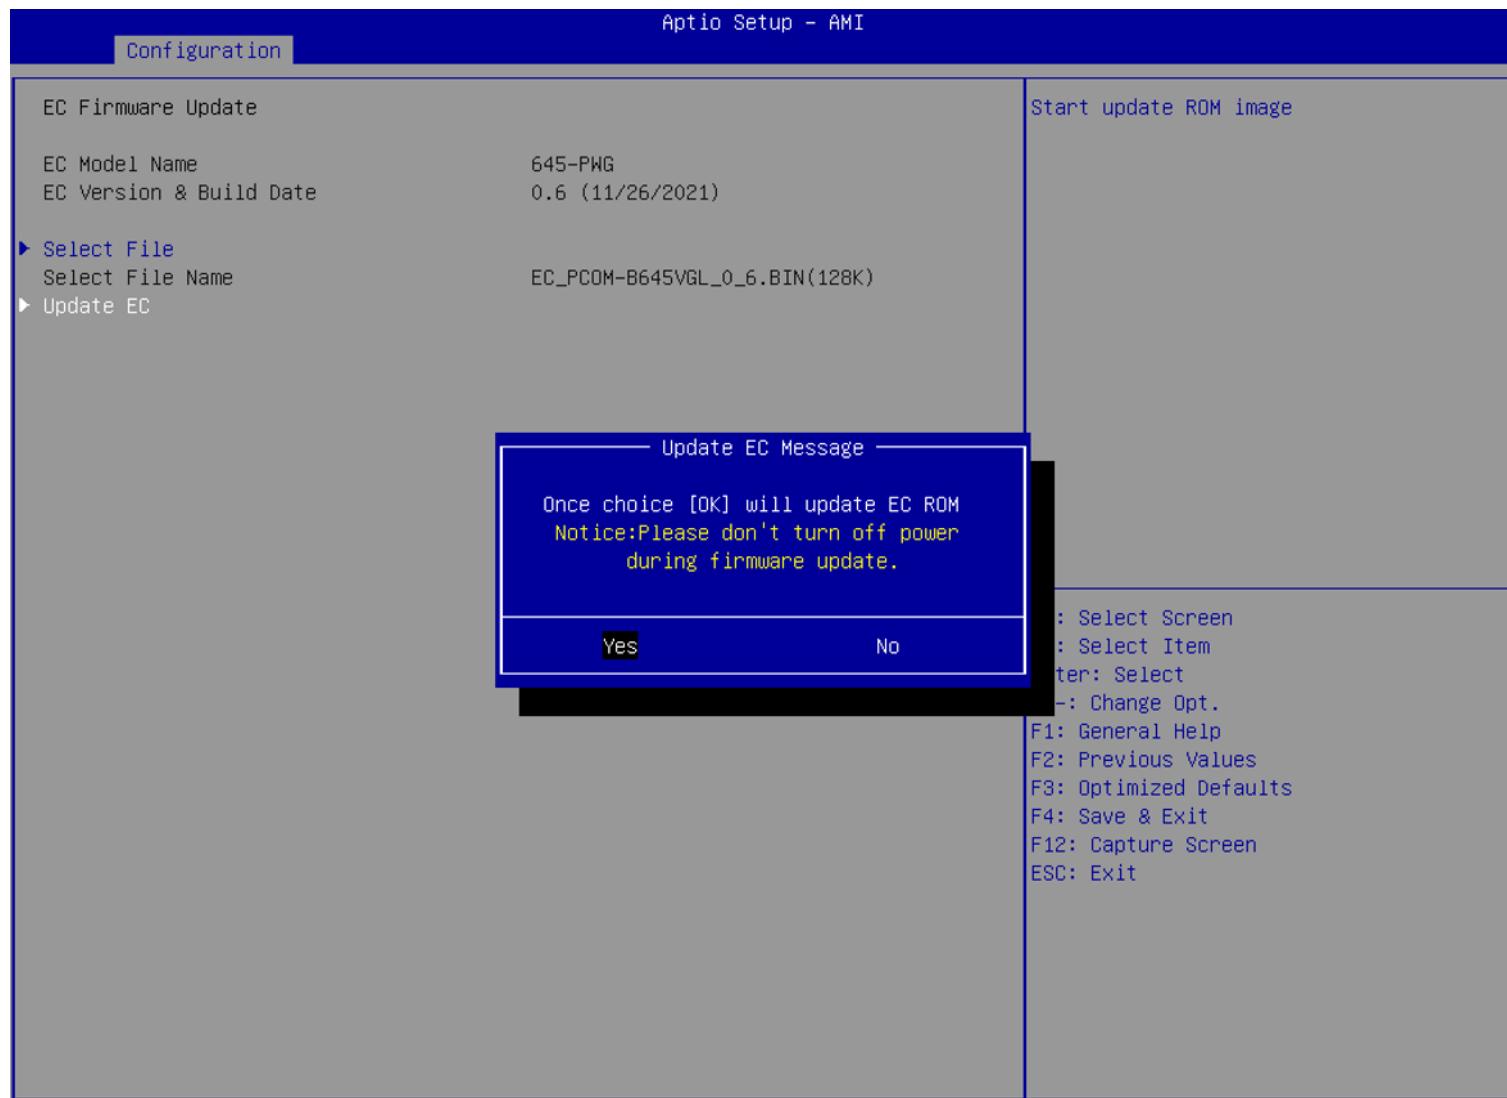

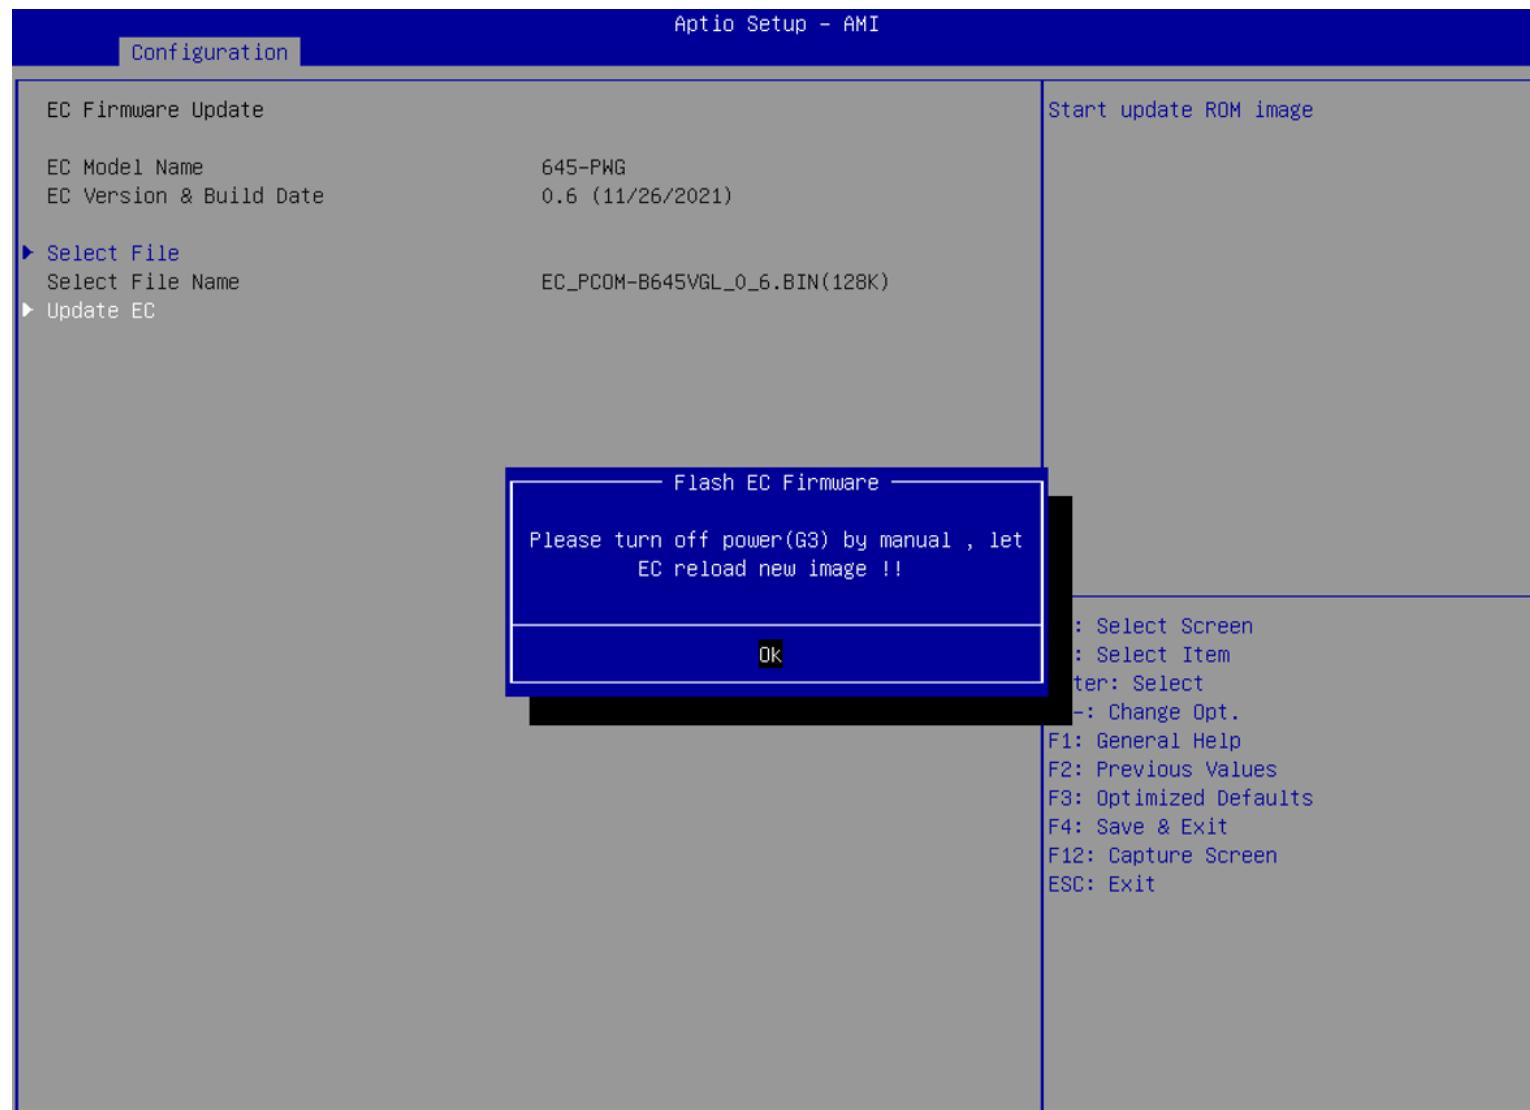

Feature	Description	Options
Terminal Type	Emulation: ANSI: Extended ASCII char set. VT100: ASCII char set. VT100+: Extends VT100 to support color, function keys, etc. VT-UTF8: Uses UTF8 encoding to map Unicode chars onto 1 or more bytes.	★ANSI, VT100, VT100+, VT-UTF8
Bits per second	Select Serial port transmission speed. The speed must be matched on other side. Long or noisy lines may require lower speeds.	★115200, 9600, 19200, 38400, 57600
Data bits	Data bits	★8, 7
Parity	A parity bit can be sent with the data bits to detect some transmission errors. Even: parity bit is 0 if the num of 1's in the data bits is even. Odd: parity bit is 0 if num of 1's in the data bits is odd. Mark: parity bit is always 1. Space parity bit is always 0. Mark and Space Parity do not allow for error detection. They can be used as an additional data bit.	★None, Even, Odd, Mark, Space
Stop Bits	Stop bits indicate the end of a serial data packet. (A start bit indicates the beginning). The standard setting is 1 stop bit. Communication with slow devices may require more than 1 stop bit.	★1, 2
Flow Control	Flow control can prevent data loss from buffer overflow. When sending data, if the receiving buffers are full, a 'stop' signal can be sent to stop the data flow. Once the buffers are empty, a 'start' signal can be sent to re-start the flow. Hardware flow control uses two wires to send start/stop signal.	★None, Hardware RTS/CTS
VT-UTF8 Combo Key Support	Enable VT-UTF8 Combination Key Support for ANSI / VT100 terminals	★Enabled, Disabled
Recorder Mode	With this mode enabled only text will be sent. This is to capture Terminal data.	★Disabled, Enabled
Resolution 100x31	Enables or disables extended terminal resolution	★Disabled, Enabled
Putty KeyPad	Select Function Key and KeyPad on Putty.	★VT100, LINUX, XTERMR6, SCO, ESCN, VT400

NVMe Support	If Disabled, NVMe device will be skipped.	★Enabled, Disabled
VGA Support		★EFI Driver
USB Support	If Disabled, all USB devices will NOT be available until after OS boot. If Partial Initial, USB Mass Storage and specific USB port/device will NOT be available before OS boot. If Enabled, all USB devices will be available in OS and Post.	★Full Initial, Partial Initial, Disabled
PS2 Devices Support	If Disabled, PS2 devices will be skipped.	★Enabled, Disabled
Network Stack Driver Support	If Disabled, Network Stack Driver will be skipped.	★Disabled, Enabled
Redirection Support	If disable, Redirection function will be disabled.	★Disabled, Enabled
Boot Option #	Sets the system boot order	Hard Disk NVME UEFI AP: UEFI: Built-in EFI Shell CD/DVD USB Device Network Disabled
Hard Drive BBS Priorities	Set the order of the legacy devices in this group.	
UEFI Application Boot Priorities	Specifies the Boot Device Priority sequence from available UEFI Application	

6.2.6 Save & Exit

Feature	Description	Options
Save Changes and Reset	Reset the system after saving the changes.	
Discard Changes and Reset	Reset system setup without saving any changes.	
Restore Defaults	Restore/Load Default values for all the setup options.	
UEFI: Built-in EFI Shell	Reset the system after saving the changes. (Boot option filter: UEFI only)	
Launch EFI Shell from filesystem device	Attempts to Launch EFI Shell application (Shell.efi) from one of the available filesystem devices.	

7. BIOS Update

How to update the BIOS file of PCOM-B645?

Step1. Please visit web site of **Portwell download center** as below hyperlink

<https://www.portwell.com.tw/support-center/download-center/>

Step2. Select “Search download” and type the keyword “PCOM-B645”.

Step3. Find the “**BIOS**” page and download the ROM file and flash utility.

Step4. Unzip file to bootable USB flash drive which can boot to SHELL mode. Then execute the “**update.efi**”. It will start to update Step BIOS.

NOTE: Once you use “update.efi” to update BIOS, it must be get into the SHELL MODE to update BIOS

Step5. When you see the “**FPT Operation Passed**” message, which means the BIOS update processes finished. Please cut the AC power off and **wait for 10seconds** before powering on.

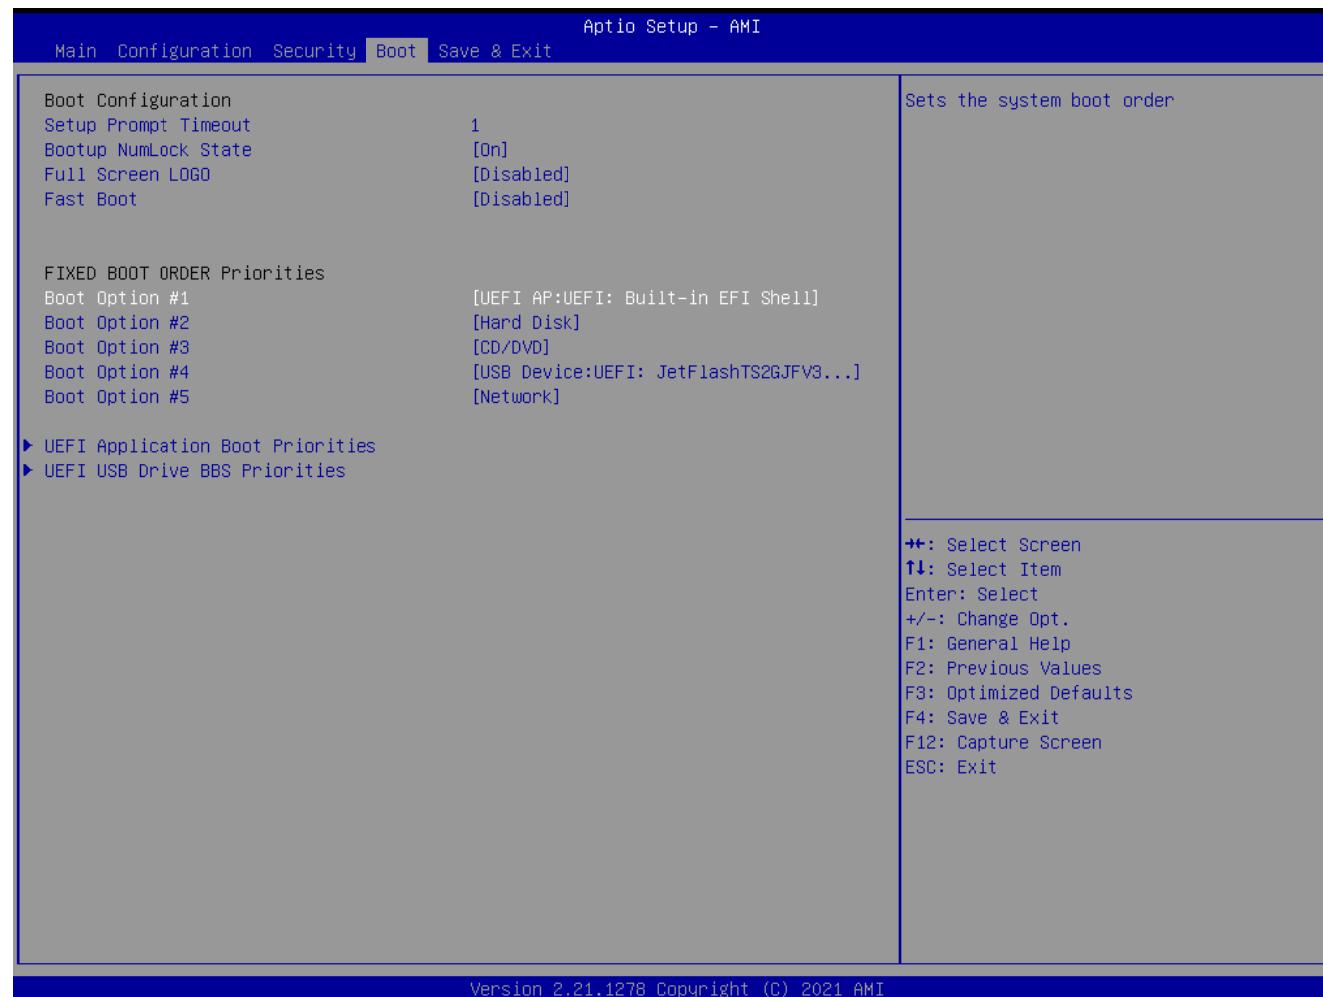

Step6. When you see the “**Programming success**” message, which means the BIOS update processes finished. Please cut the AC power off and **wait for 10 seconds** before powering on

Please refer to the following steps in detail.

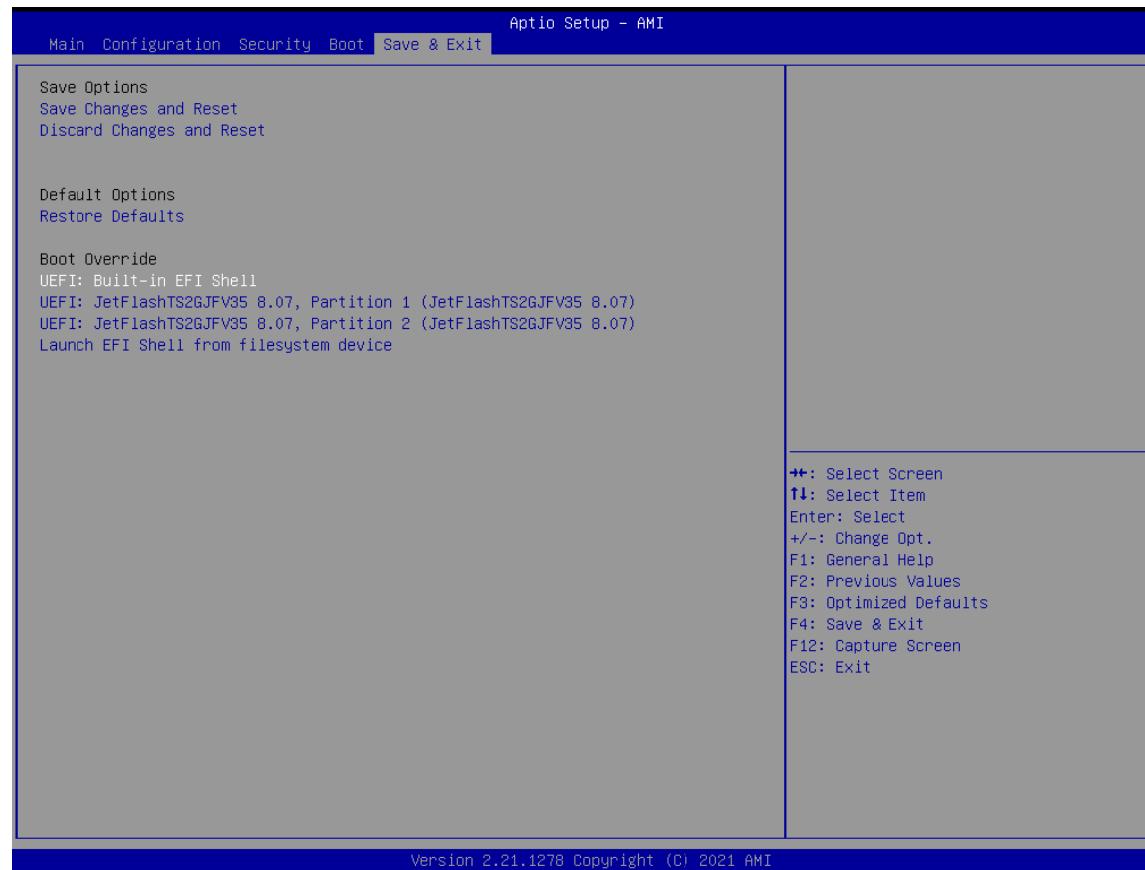

Step 1. Prepare a USB DOK.

Step 2. Unzip update file to the USB DOK.

Step 3. Select UEFI: Built-in EFI Shell in the BIOS boot menu and save, then restarts the system.

Step 4. Plug the USB DOK into the target system and boot from UEFI Shell.

Step 5. Under the UEFI shell, direct to your USB DOK, below is an example uses fs0. Then direct to the folder with updated file and type command: "update" and press enter.
